

Knowing your normal could save 1000 lives every year!

Bowel & Liver Trust

...getting to the guts of the matter!

GUT HEALTH KNOW YOUR NORMAL

Do You Know Your Normal

Bowel movements are not something we like to talk about or study but a few minutes every day could save your life.

There is one important thing you need to know and watch for in Bowel movements – **CHANGE!**

To understand Change you need to - KNOW YOUR NORMAL

Frequency and Change

What is your Normal? Do you have a bowel movement every day, every second day, twice a day? Keep a chart for a month and then from time to time check again – this could save your life

Texture and Change

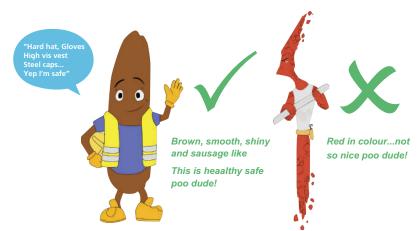

What is your normal? Is the shape and consistency of your poo like a sausage, separate hard lumps, soft blobs, lumpy and sausage like?

Colour and Change

What is your Normal? If it's Brown coming down there is no need to Frown. Changes in colour such as red (Blood in the Poo) or Black or Grey make a time to visit your doctor. It could save your life.

Knowing your normal takes time!

Normal is not always exactly the same everyday and for each person. For some people you may have 1-3 Bowel Movements per day and vary between soft and formed - this would be your normal and that variability would be seen as alright.

BE SAFE AND HEALTHY

Bowel cancer is a huge killer in NZ Get a check if you have

- Changes in your Bowel habits
- Different colour to your poo
- You are over 50
- Someone in your family had Bowel cancer

Today and everyday in New Zealand 9 NZs find out they have Bowel cancer and 3 of those will die – Don't let it be you.

GUT HEALTH

Your Poo Guide!

Type 1: Separate hard lumps

Type 2: Lumpy and sausage like

Type 3: A sausage shape with cracks in the surface

Type 4: Like a smooth, soft sausage or snake

Type 5: Soft blobs with clear cut edges

Type 6: Mushy consistency with ragged edges

Type 7: Liquid consistency with no solid pieces

Chart your normal below!

Day	Frequency	Texture	Colour	
1				A diet rich in whole
2				foods and plenty of
3				filtered water helps to
4				keep constipation at bay.
5				Healthy Poo do not
6				contain undigested food parts. If they have
7				undigested parts, it
8				usually means that we
9				chewed our food too
10				quickly or we have
11				insufficient acid for the breakdown of food
12				parts. To counter this,
13				try drinking warm lemon
14				water in the morning.
15				Check when you use the
16				bathroom. If your stool
17				is less than perfect, work on your diet. In the end,
18				what comes out your
19				back end is generally the
20				result of what you put in
21				your front end.
23				Floaters are good,
23				they indicate a healthy amount of fibre and
25				essential fatty acids.
26				If you are lacking in
27				healthy fats, and this
28				will cause stools to sink
29				immediately
30				NOW YOU KNOW
31				YOUR NORMAL!
